Viroment Wins First Place in the Midwest Cleantech Open Competition Supports Rising Startups in the Clean Technology Industry

(November, 18, 2015) – Minneapolis-based wastewater processing innovator Viroment has earned first place at the Midwest Cleantech Open, sponsored by the University of St. Thomas Schulze School of Entrepreneurship. The Midwest Cleantech Open runs a business competition in addition to operating as an accelerator providing mentorship to startups in the clean technology space.

Viroment's proprietary technology creates a closed-loop wastewater processing cycle, producing valuable reuse water and multiuse bio-cake out of municipal and industrial sludge. The process results in decreased wastewater processing costs, lower regulatory fees and a significantly reduced impact on the environment when compared to traditional treatment methods.

"This win presents an immense opportunity for Viroment to expand the reach of our technology," said Paul Koenig CEO of Viroment. "The Midwest Cleantech Open has a successful history of supporting emerging technologies that create a healthier, more sustainable planet for future generations."

Founded in 2010, the Midwest Cleantech Open has supported over 90 startups who have gone onto raise more than \$20 million in capital. Viroment will advance to the 2015 Global Cleantech Forum on November, 19th in San Francisco where they will compete against fellow clean tech startups from around the world and meet with potential investors.

For more information, please visit Viroment's new website at www.viroment.com.

About Viroment:

Viroment provides a unique vacuum drum drying wastewater treatment system to help municipal and industrial wastewater facilities meet their mandated sludge disposal requirements. Their technology significantly reduces sludge handling fees, with reduced environmental impact and regulatory costs.
